1. Sign in single color selected
  2. Short USB mini cable
  3. AC-USB Connector
  4. DC-USB Connector
  5. 3 meter USB mini cable
  6. 2 Suction cups

These 3 screens from the App are your primary access. The screen on the left comes up after registration and is the main message screen used to send a message or messages to the sign. The MENU screen in the middle gives you options to add a new message, add a clock or add a count-up or count-down timer to your list of messages, change the sign brightness or turn it off remotely. The screen on the right is where you enter messages or change an existing message, set the time, speed, effect and frame for each message.

There are 3 Styles: normal, bold and small. These give you some flexibility when styling your message.

Time can be adjusted to provide a delay between rotation of the message or messages.

Speed can be adjusted to display the effect from very slow to very fast.

There are 20 different Effects that you can choose to customize and draw attention to your message. The "Blink" and the "Snow" are especially effective. Select "Random" and you get a new effect each time the message is

displayed. Effects may be unique per message. If you display more than one message each message can display a different effect.

**Frame** outlines the entire message to really make it stand out. Several different frame options are available.

**Pairing** your sign should not be required, if your Bluetooth is turned on the sign should connect when the App is opened. One person can control the sign at a time. Close the App to give control to another user. Bluetooth connections generally work up to 30ft away.

**Charging** the battery completely takes approximately 5 hours and should provide over 6 hours of use. The battery can only be charged when the sign is not in use. The battery does not charge during AC/DC use.

## Other Features:

On the *left* you can add current **Time** in two different formats.

In the *middle* you can create a Count-Down or Count-Up **Timer** up to 24 hours.

You can send multiple messages in sequence. From the **MAIN message screen**, upper right corner tap **Sync**. As shown on the screen to the *right*, highlight the dot with the messages you want to include in the sequence. Tapping the **Send** key will send all the selected messages to the sign and each message selected will be displayed in numerical sequence.

You can also change the order of a message by tapping on its number, a selection bar will come up and you can scroll it to the new position.

When the App connects to the sign for the first time you will be asked to register using an email address. At that point we capture the date, time, email and unique ID of your sign for warranty purposes only. The one year warranty starts when you first connect to the sign. We do not use your email for any marketing purpose and we protect it from unauthorized use. Each sign you buy should require registration only once when you initially connect. After that you should be able to use all the signs you buy with just one App.

This sign complies with FCC Part 15B, Class B.
